BRAIN TRAINING

Course Description

AMAKids's program aims to improve a child's intellectual capabilities with the help of an abacus. The abacus is an ancient calculating tool coming from Japan and is used for the calculation of addition, subtraction, multiplication and division. Already in the first lesson children learn to use not only the physical abacus but also a mental one. This allows children to use both sides of the brain, which as a result improves the efficiency of the brain.

Children come to the class once a week for 1h and after the class they get personalised access to AMAKids's 24/7 online platform. Kids work on their customised program which requires 15 minutes of training 4 times per week. This is monitored by a trained teacher and is why progression is much more likely

The course helps children perceive and process any information quickly, use both hemispheres of the brain simultaneously, improve concentration, memory and self confidence!

Benefits:

- Harmonious development of both hemispheres of the brain
- AMAKids have found that students are able to calculate faster than most adults and recite a poem simultaneously!
- Improved information processing (this course helps children to perceive and process ALL information faster)
- Increased concentration
- Improved photographic memory
- Improved self confidence

Thursday 16:00-17:00
